- 4 Upgrading Composer

Composer Versioning

Composer may have non-consecutive version numbers. The version number always corresponds with a version of the Casper Suite, but Composer is not necessarily released every time the Casper Suite is released.

Note: The Casper Suite is a complete OS X and iOS management solution available from JAMF Software.

Bug Fixes and Enhancements

New workflow for building OS packages—Composer can now be used to create a single DMG that includes multiple partitions. As a result, you no longer need to create a separate DMG of the “Recovery HD” partition or manually add a partition to a configuration.

Installation

Requirements

Composer v9.7 can run on the following operating systems:

- OS X v10.5.x (Composer v9.32 or earlier)
- OS X v10.6.x (Composer v9.32 or earlier)
- OS X v10.7.x
- OS X v10.8.x
- OS X v10.9.x
- OS X v10.10.x

Composer v9.32 or earlier is available from JAMF Nation.

Upgrading Composer

To upgrade Composer, simply replace it with the most current version.

It is also recommended that you open Composer’s Preference window and verify the new Exclusion List.
