

IT teams demand best-of-breed tools to deploy, secure, and report on every device in an enterprise environment.

Microsoft's Systems Center Configuration Manager (SCCM) is one such tool for managing Windows computers. But its capabilities are limited on the Mac.

The Casper Suite is the preferred enterprise choice for Mac management. It gives IT administrators a comprehensive management tool set for Mac and lets IT administrators manage Mac computers in a similar way to how Windows computers are managed with SCCM.

Microsoft SCCM Feature	SCCM WINDOWS	SCCM OS X	CASPER SUITE OS X	Casper Suite Feature
Alerts	●	●	●	Software Restrictions
Application Catalog	●	●	●	Self Service
Asset Intelligence	●	●	●	Inventory Collection
Bitlocker Enforcement	●	●	●	FileVault 2 Enforcement
Boot Image	●	●	●	Netboot Image
Collections	●	●	●	Smart/Static Groups
Compliance Settings	●	●	●	Policy, Configuration Profile
Dashboards	●	●	●	Dashboards
Distribution Points	●	●	●	JDS, AFP Shares, SMB
Global Conditions	●	●	●	Extension Attributes
Hardware Inventory	●	●	●	Hardware Inventory
Logs	●	●	●	Change Management, Logs
OS Deployment / OSD	●	●	●	Imaging
Patching	●	●	●	Patching
PXE Server	●	●	●	Netboot Server
Remote Control	●	●	●	Casper Remote
Remote Wipe/Lock	●	●	●	Remote Wipe/Lock
Reports	●	●	●	Smart Groups
SMTP Server	●	●	●	Alerts/Notification Server
Software Distribution	●	●	●	Packages, App Distribution
Software Metering	●	●	●	License/Restricted Software
Software Updates	●	●	●	Software Update Server

When used together and integrated, Casper Suite and SCCM can help IT departments successfully manage all devices with ease, saving valuable time and cost.
