Introduction

Target Audience

This guide is designed for Casper Suite administrators who plan to administer Parallels Desktop[®] 6 for Mac in the enterprise.

What's in This Guide

This guide provides step-by-step instructions for deploying, registering, and reporting on Parallels Desktop with the Casper Suite.

Important Concepts

Administrators using this guide should be familiar with the following Casper Suite-related concepts:

- Package management
- Deployment
- Licensed software reporting
- Application usage reporting
- Smart computer groups

Additional Resources

For more information on applications, concepts, and processes related to the Casper Suite, download the *Casper Suite Administrator's Guide* available at:

http://jamfsoftware.com/resources/documentation

For more information on Parallels Desktop 6 for Mac, see the *Parallels Desktop Users Guide* available at:

http://download.parallels.com/desktop/v6/docs/en/Parallels_Desktop_Users_Guide.pdf

For more information on the Parallels Desktop Autodeploy package, see the *Mass Deployment of Parallels Desktop* guide available at:

http://download.parallels.com/desktop/v6/docs/en/Mass_Deployment_of_Parallels_Desktop.pdf

Requirements

To administer Parallels Desktop using the instructions in this guide, you need:

- Casper Suite v8.1 or later running in your environment
- A Parallels Desktop 6 for Mac installer disk image
- A valid Parallels Desktop serial number
- Access to the JAMF Software Server (JSS)
- Casper Admin
- Casper Remote
- Composer

Deploying Parallels Desktop

Deploying Parallels Desktop involves the following steps:

- 1. Create a Parallels Autodeploy package.
- 2. Create a virtual machine.
- 3. Create a virtual machine DMG.
- 4. Upload the Autodeploy package and the virtual machine DMG to the JSS.
- 5. Deploy the Autodeploy package and the virtual machine DMG.

Creating an Autodeploy Package

- Download the Parallels Autodeploy package from: http://download.parallels.com/desktop/tools/pd-autodeploy.zip
- 2. Download the *Parallels Desktop 6 Mass Deployment* guide from: http://download.parallels.com/desktop/v6/docs/en/Mass_Deployment_of_Parallels_Desktop.pdf
- 3. Follow the instructions in the "Adding Parallels Desktop" section to create an Autodeploy package.

Important: Do not add a virtual machine to the Autodeploy package.

Note: Currently, Parallels volume licenses are available for customers purchasing 20 seats or more. Volume serial codes can be deployed to multiple computers as a single package.

When you are finished creating the Autodeploy package, it should contain the Parallels Desktop software and serial number.

Creating a Virtual Machine

- 1. Download the *Parallels Desktop 6 Users Guide* from: http://download.parallels.com/desktop/v6/docs/en/Parallels_Desktop_Users_Guide.pdf
- 2. Follow the instructions in the "Setting Up a Virtual Machine" section to create a virtual machine.

3. When you get to the Name and Location pane in the New Virtual Machine Assistant, select the Share with other users of this Mac checkbox.

This saves the virtual machine in the /Users/Shared/Parallels/ directory.

When you are finished creating the virtual machine it is saved as a .pvm file.

Creating a Virtual Machine DMG

Before deploying the virtual machine, package it as a DMG using the Composer application.

To create a virtual machine DMG:

- 1. Open Composer.
- Open a Finder window and locate the virtual machine .pvm file.
 If you followed the instructions in this guide, the file is located in the /Users/Shared/ Parallels/ directory.
- 3. Drag the .pvm file to the Sources list in Composer.
- 4. When Composer is finished creating the package source, click the **Build as DMG** button.

0 \varTheta 🔘	Composer 8.1	
🥪 🗳		۹ 🙁
New Package Reveal In Finder	Quick Look Delete	Search
SOURCES	Users Users	
PACKAGES		
	Owner: row Group: ad Everyone: Users	ot (0) ↔ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥ ♥
+ - •		Build as DMG Build as PKG

- 5. When prompted, save the package in the desired location.
- 6. When Composer is finished building the package, quit the application.

Uploading the Autodeploy Package and the Virtual Machine DMG

Once you have created both the Autodeploy package and the virtual machine DMG, upload them to the JSS using the Casper Admin application.

To upload the Autodeploy package and the virtual machine DMG:

- 1. Open Casper Admin.
- 2. Log in using credentials for a JSS administrator account.
- 3. Drag the Autodeploy package and the virtual machine DMG into the repository in Casper Admin.
- 4. Double-click the Autodeploy package in the repository.

- 5. In the Information pane that appears, click the Info tab.
- 6. Use the **Category** pop-up menu to assign the package to a category and then click the **OK** button.
- 7. Double-click the virtual machine DMG in the repository.
- 8. In the Information pane that appears, click the Info tab.
- 9. Use the **Category** pop-up menu to assign the package to a category and then click the **OK** button.
- 10. Save your changes and quit the application.

Deploying the Autodeploy Package and the Virtual Machine DMG

Deploy the Autodeploy package and the virtual machine DMG together using one of following deployment methods:

- A policy
- Casper Remote
- During imaging
- Self Service

Note: This guide does not include instructions for the Self Service method. See the "Making Policies Available through Self Service" section in the *Casper Suite Administrator's Guide* for instructions.

To deploy the Autodeploy package and the virtual machine DMG using a policy:

- 1. Log in to the JSS with a web browser.
- 2. Click the Management tab.
- 3. Click the **Policies** link.
- 4. Click the **Create Policy** button in the toolbar.
- 5. Choose the **Create policy manually** option and click **Continue**.
- 6. In the **Display Name** field, enter a display name for the policy.
- 7. Use the **Triggered By** pop-up menu to choose a trigger for the policy. The recommended trigger is "every15".

Edit Policy:	Untitled P	olicy							
() General	Scope	Self Service	e Packages	Scripts	P rinters	Dock	Accounts	() Reboot	in the second se
Dis	play and Ex	ecution Settings	i						
	Disp	lay Name: Instal	l Parallels Deskt	op 6 for Mac					
	Tele	Category: No C	ategory						
	Execution F	requency: Disa	bled	Only)					
▶ Dat	e and Time	e Limitations							
► Net	work Limit	ations							
► Ove	erride Defa	ult Policy Setting	gs						
								Ca	ncel Save
-	_	_	_	_	_	_	_		

- 8. Select "Once per computer" from the **Execution Frequency** pop-up menu.
- 9. Click the **Scope** tab and assign a scope to the policy.
- 10. Click the **Packages** tab and then click the **Add Package** link.
- 11. Locate the Autodeploy package and the virtual machine DMG in the list of packages and then choose "Install" from the **Action** pop-up menus across from them.
- 12. Click the Add Package(s) button at the bottom of the list.

<i>i</i> General	Scope	CO Self Service	🥪 Packages	Scripts	Printers	SSI Dock	Accounts	() Reboot	麊 Advanced
		Package Na	me		Category		A	tion	
example.pvm.dmg				Unknow	vn Install 🗘				
Paralle	els Desktop	Autodeploy.pkg			Unknow	n	Install	\$)
				Add Pack	age(s)				

13. Click the **Save** button.

If you selected the "every15" trigger as recommended, the package is deployed within the next 15 minutes to computers in the scope.

See the "Registering the Virtual Machine" section in this guide for instructions on registering the virtual machine using a policy. In certain environments, deployment and virtual machine registration can be merged into a single policy.

To deploy the Autodeploy package and the virtual machine DMG using Casper Remote:

- 1. Open Casper Remote
- 2. Log in using credentials for a JSS administrator account.
- 3. On the **Computers** tab, locate the computers that you want to receive the deployment and select the checkbox next to each one.
- 4. Click the **Packages** tab.

5. Locate the Autodeploy package and the virtual machine DMG in the Packages list, and select the checkbox next to each one.

00	Casper Remote 8.1
	Filter Packages

	All Cached Packages Software Update
	Install All Cached Packages Set Server Install all updates
	Save as Schedule Co

- 6. Click the **Go** button to initiate the deployment.
- 7. When the deployment is complete, quit the application.

The Autodeploy package and the virtual machine DMG are immediately deployed to target computers.

To deploy the Autodeploy package and the virtual machine DMG during imaging:

- 1. Open Casper Admin.
- 2. Log in using credentials for a JSS administrator account.
- 3. Drag the Autodeploy package and the virtual machine DMG from the repository to a configuration in the sidebar.
- 4. Select the configuration in the sidebar.

5. Double-click the Autodeploy package in the repository.

0 🔴 😁		Cas	per Admin 8.1					\bigcirc
New Config New Cat	tegory Add Printers Add	Dock Items New A	dobe Install	i S	Empty Trash	Q	Filt	er.

- 6. In the **Information** pane that appears, click the **Options** tab.
- 7. Select the This package must be installed to the boot volume at imaging time checkbox.
- 8. Click the **OK** button.

The Autodeploy package and the virtual machine DMG are deployed the next time you use the configuration to image computers.

Registering the Virtual Machine

Parallels Desktop virtual machines must be registered with the application to appear in the Virtual Machine list at first launch. There are two ways to accomplish this:

- 1. On the client, double-click the virtual machine .pvm file in a Finder window.
- 2. Create a policy that runs the following registration command at user login:

sudo -u <username> prlctl register "/Users/Shared/ Parallels/<example.pvm>"

Additionally, you can dynamically pass the user name by running the following command as part of a script using a "login" or Self Service policy:

sudo -u \$3 prlctl register "/Users/Shared/Parallels/<example.pvm>"

If you choose to deploy a script, you must first upload it to the JSS using Casper Admin. For detailed instructions, see the "Managing Scripts" section in the *Casper Suite Administrator's Guide*.

To run the registration command using a policy:

- 1. Log in to the JSS with a web browser.
- 2. Click the Management tab.
- 3. Click the **Policies** link.
- 4. Click the **Create Policy** button in the toolbar.
- 5. Choose the **Create policy manually** option and click **Continue**.
- 6. In the **Display Name** field, enter a display name for the policy.

7. Choose "login" from the **Triggered By** pop-up menu.

eneral Scope Self Service Packages Scripts Printers Dock Display and Execution Settings	Accounts Reboot A	Advance
Display and Execution Settings		
Display Name: Run Parallels Registration Command		
Category: No Category		
Triggered By: None (or Self Service Only)		
Execution Frequency: Disabled		
Date and Time Limitations		
▶ Network Limitations		
Override Default Policy Settings		

- 8. Choose "Once per user" from the **Execution Frequency** pop-up menu.
- 9. Click the **Scope** tab and assign the appropriate users to the scope.
- 10. If you are including the registration command as a script to dynamically populate the user name, click the **Scripts** tab and add the script. Then, skip to step 12.

For detailed instructions on adding a script to a policy, see the "Policies" section in the Casper Suite Administrator's Guide.

11. If you are hard coding the registration command, click the **Advanced** tab and enter the following command in the **Run Command** field, making sure to specify the <username> and <example. pvm> variables:

sudo -u <username> prlctl register "/Users/Shared/ Parallels/<example.pvm>"

Note: You must hardcode the <username> and <example.pvm> variables in this command. They cannot be dynamically populated from this field.

12. Click the **Save** button.

The policy runs the next time users in the scope log in to their computers.

Reporting on Parallels Desktop

After deploying Parallels Desktop and registering the virtual machine, you can use the Casper Suite to track licenses and report on how often they are used. This information can be used to:

- Remediate clients that do not have Parallels Desktop installed
- Retrieve unused licenses

Reporting on Parallels Desktop involves the following steps:

- 1. Create a licensed software record.
- 2. Update inventory in the JSS.
- 3. Generate a Licensed Software report.
- 4. Generate an Application Usage report.
- 5. Create a smart computer group.

Creating a Licensed Software Record

Creating a licensed software record allows you to store Parallels Desktop licensing information in the JSS.

To create a licensed software record:

- 1. Log in to the JSS with a web browser.
- 2. Click the **Settings** tab.
- 3. Click the Licensed Software Management link.
- 4. Click the Create Licensed Software button in the toolbar.
- 5. Enter a name for the record, such as "Parallels Desktop 6.0 for Mac".
- 6. Enter the name of the publisher in the Publisher field. In this case, enter "Parallels Holdings, Ltd."

7. Choose "Macintosh" from the **Platform** pop-up menu.

Edit Lice	ensed Software:	
() Info	J Licenses Softwar	e Definitions
	Display Name: Publisher: Platform: 	Parallels Desktop 6.0 for M Parallels Holdings, Ltd. Any ÷ end Email Notification on Violation Remove Software Titles from Inventory Reports
	Notes:	
		Cancel Save

- 8. Click the Licenses tab and click Add License.
- 9. In the Serial Number 1 and Serial Number 2 fields, enter serial numbers for Parallels Desktop as needed.

Edit L	icensed Software: Pa	rallels Desktop 6.0 for Mac
() Info	Licenses Sof	tware Definitions
_	License Info	
	Serial Number 1: Serial Number 2:	
	Registered To: License For:	O Licenses
		Concurrent Licenses
	Notes:	
		Cancel) (Store License)

- 10. Make sure the Licenses For option is selected and enter the number of licenses in the Licenses field.
- 11. Click the **Store License** button.
- 12. Click the **Software Definitions** tab.

- 13. Click Add Application.
- 14. Enter "Parallels Desktop.app" as the application title.
- 15. Choose "like" from the Version pop-up menu and enter "6" as the version number.
- 16. Click the **Store Definition** button.
- 17. Click the **Save** button.

Updating Inventory

The JSS must contain up-to-date inventory information to generate accurate reports. Although computers automatically submit updated inventory reports to the JSS according to the set frequency, you may want to generate inventory reports on the fly. You can do this using the Casper Remote application.

To update inventory using Casper Remote:

- 1. Open Casper Remote.
- 2. Log in using credentials for a JSS administrator account.
- 3. On the **Computers** tab, select the checkbox next to each computer that has Parallels Desktop installed.
- 4. Click the **Advanced** tab.
- 5. Select the **Update Inventory** checkbox.
- 6. Click the **Go** button to initiate the update.

00	Casper Remote 8.1	
	× 🙆	8
New Window Control Observe	Override Defaults Refresh Data

	Files & Processes Search for file by path: Search for file by name:	Delete if found
	Spotlight Search: Search for Process: Run Command:	Kill if found
	(Save as Schedule Go

7. When the update is complete, quit the application.

Generating a Licensed Software Report

Licensed Software reports allow you to view the following information about the licenses owned by your organization:

- Number of licenses owned
- Number of licenses in use
- · Computers that have the licenses installed

To generate a Licensed Software report:

- 1. Log in to the JSS with a web browser.
- 2. Click the **Inventory** tab.
- 3. Click the Licensing link above the search field.
- 4. Enter the licensed software title in the search field. In this case, type "Parallels Desktop 6.0 for Mac".
- 5. Click the **Search Licensing** button, or type the **Enter** key.

Parallels Des	ktop 6.0 for Ma	ac						Inventory Options
			Searc	h Licens	ing			Add Licensed Software

Generating an Application Usage Report

Application Usage reports go one step beyond license tracking by allowing you to view which licenses are being used. You can then create a computer group based on the results of the report and use it to reclaim unused licenses.

To generate an Application Usage report:

- 1. Log in to the JSS with a web browser.
- 2. Click the Logs tab.
- 3. Click Application Usage Logs.
- 4. Use the **Reports Starting** and **Reports Ending** pop-up menus to set a date range for the report.

5. Click View Usage across from the "Parallels Desktop 6.0 for Mac" to view full usage details.

Application Usage In	formation	
Licensed Software	Computer Groups Departments Buildings	
	Reports Starting: 3 / 28 / 2011 * Reports Ending: 4 * / 28 * / 2011 *	
	Licensed Software Title Parallels Desktop 6.0 for Mac View Usage	
		Cancel

To reclaim unused licenses:

- 1. Generate an Application Usage report as explained in the previous procedure.
- 2. After clicking the **View Usage** link, click the **Unused Licenses** tab. This displays a list of computers that have unused licenses.
- 3. Click the **Create Computer Group** button to create a group that contains these computers.
- 4. Create a policy to uninstall Parallels Desktop and assign the group you just created as the scope. For detailed instructions, see the "Uninstalling Packages" section in the *Casper Suite Administrators Guide*.

Creating a Smart Computer Group

Smart computer groups can be used when you need to deploy policies or report on computers that have Parallels Desktop installed. Group membership is updated automatically when computers submit inventory reports to the JSS.

The following instruction explain how to create a smart computer group for computers that have Parallels Desktop installed.

To create a smart computer group:

- 1. Log in to the JSS with a web browser.
- 2. Click the **Management** tab.
- 3. Click Smart Computer Groups.

- 4. Click the **Create Smart Group button** in the toolbar.
- 5. Enter a name for the group, such as "Parallels Desktop 6.0 for Mac Installed".
- 6. In the list of categories, click Add (+) across from Software Information.
