WORKER SAFETY 101:

Keeping employees and organizations
safe with technology

SUCCESS STARTS WITH SAFETY.

With more businesses than ever moving employees to remote work and bringing analog workflows online, worker safety as a whole is becoming a more complex topic. From construction sites to entirely remote businesses or schools, device utilization in a wide range of environments adds a number of safety, deployment and security variables.

Many organizations struggle with the complexity of these considerations, whether through the added costs of insurance liability and settlements, or at the expense of device usability and user experience.

Now, with Jamf, you can empower your employees to take an active part in the safety experience of their mobile technology, and automate business-critical policies to save them added stress allowing them to simply get work done. And with the addition of powerful partnerships, such as TRUCE Software, you can be assured that workers remain free of stress and distractions while on the job.

Why is worker safety so important?

As technology is integrated into more jobs, reducing distraction and promoting efficiency is increasingly important. If employees and workers are fussing with their devices on the job, one distracted moment could literally mean the difference between life and death.

1 IN 5

fatally injured workers in 2019 was a mobile sales worker or truck driver

NEARLY 40%

of workplace-related fatalities in 2019 involved transportation incidents

1 IN 5

employee deaths in 2019 were in the construction industry

EMPOWER EMPLOYEES WITH CHOICE.

Apple use is on the rise with a growing number of employees in the workforce requesting to work on the devices they prefer. In a recent study from Vanson Bourne, a global third-party market research firm, 94% of survey participants agree they are more likely to choose/stay at a company which offers them a choice in work computer or mobile device. Respondents also made it clear that the device types they work on have a direct impact on their productivity and efficiency.

Similarly, worker safety should not be compromised by the technology users choose to use. Employees have the right to be productive and safe using their technology of choice in any context — whether behind the wheel, in the warehouse or on the job site.

HOW CAN JAMF HELP?

As the leader in Apple Enterprise Management, Jamf provides the best tools and experience for employees to use their devices efficiently when they need them — and to stay focused when they don't. With Jamf's sole focus on the Apple ecosystem, you can be sure to get best-in-class solutions from the foundation to the pinnacle of worker safety.
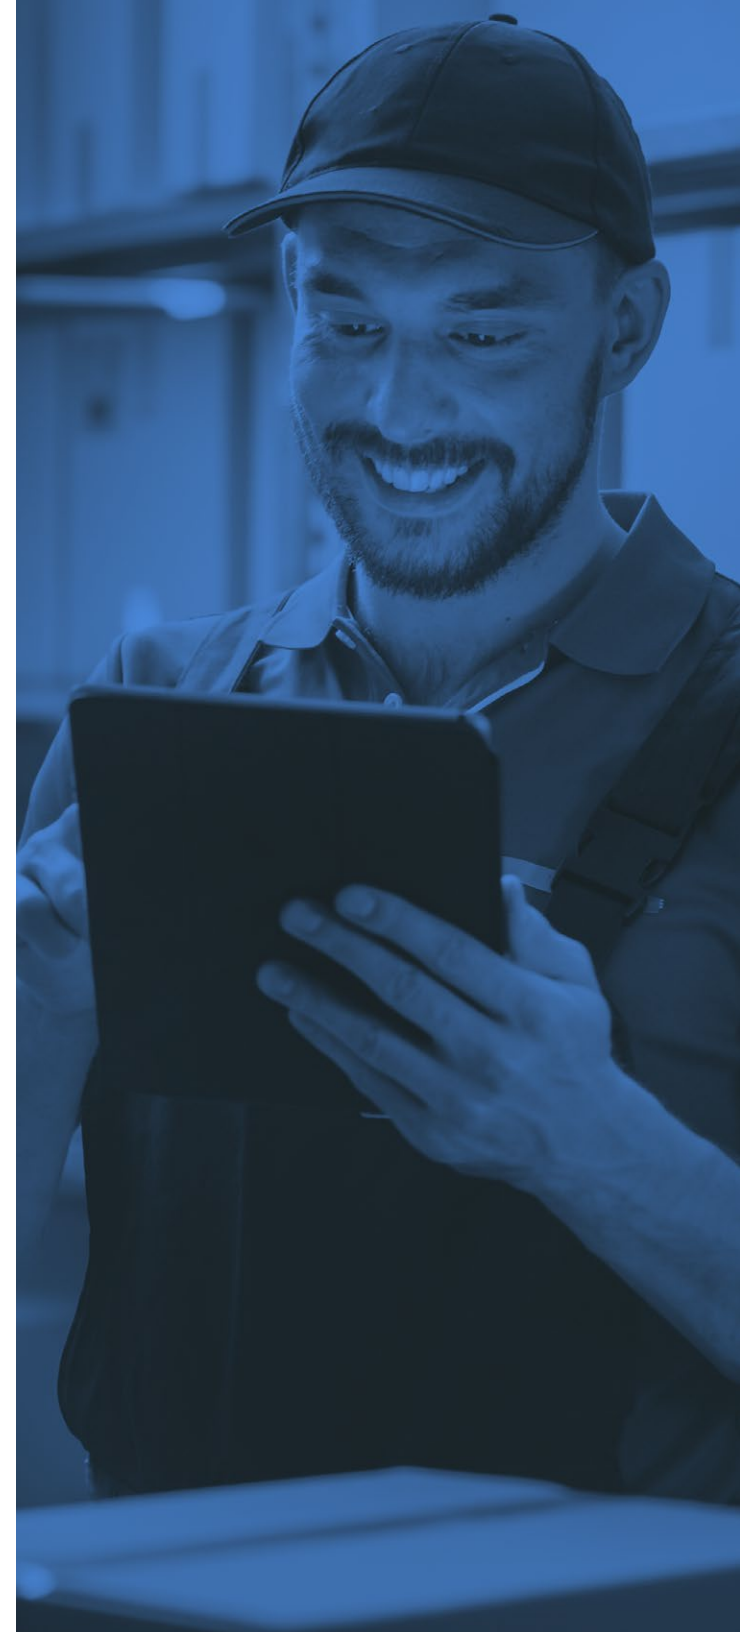

With Jamf you can:

- Provide a productive and meaningful user experience

- Protect organizations from liability

- Keep employees safe on their shift from start to end

WHAT'S APPLE ECOSYSTEM MANAGEMENT?

Apple operating systems come together and function as an ecosystem by design. For example, users can unlock their Mac from their Apple Watch, create a presentation on their Mac, continue editing the presentation on their iPad and then present via Apple TV.

To get the most out of the Apple ecosystem, iOS, iPadOS, macOS and tvOS devices are best when managed together with a purpose-built solution, like Jamf. By managing devices by ecosystem, management tasks are optimized without compromising native functionality. In addition to the Apple experience end users expect, with same-day support, organizations can also upgrade to the latest Apple operating systems (OSs) with all of their new features and security mechanisms the day they ship from Apple. Now that's efficiency.

KEY FEATURES

With Jamf's cloud-based solutions, get everything needed to deploy mobile devices in a safe, productive and scalable way. Let's dig into some of the top reasons mobile device management (MDM) with Jamf promotes better worker safety.
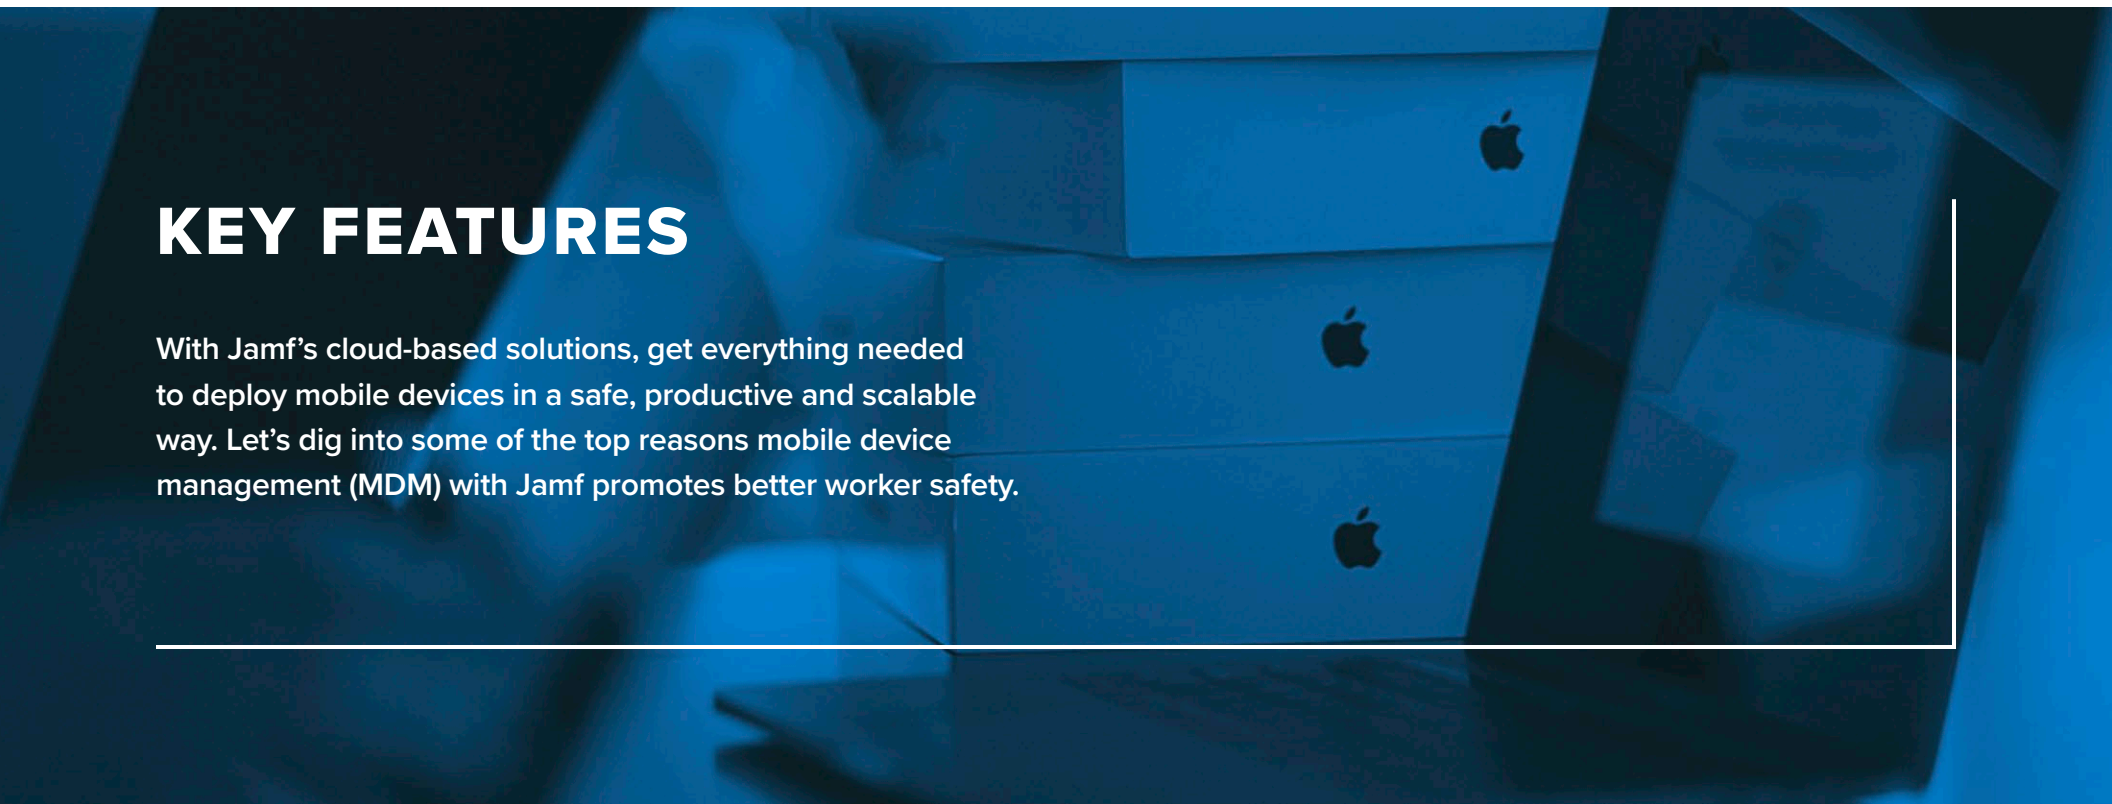

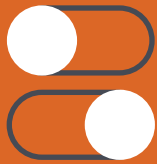

Standardization

Create a device experience with the employee in mind, whether being used by one or many. Set the wallpaper with a company logo, define the Home Screen layout to meet specific needs and hide unwanted system apps that are not needed for employees' productivity. With Jamf's Self Service portal, employees can also download the apps and resources they need on demand, removing roadblocks and getting everyone on task faster.

Managed Lost Mode

If an iPhone or iPad gets lost, put the device in Lost Mode and Low Power Mode to find the device and manage battery life. In just a few clicks, the admin will know the location of the device and have the peace of mind that company data is safe and secure. In addition, they can customize a message to inform where the device should be returned.

Data usage management

Jamf helps admins ensure the right apps connect to the right network. Easily restrict changes to personal hotspots, use APN configuration to assign devices to cellular network and enforce Wi-Fi "on or off." When using iPad, simplify carrier connectivity for eSIM deployment with Jamf.

Privacy protection

Keep your devices secure and maintain the trust and privacy of employees. Mobile device management will not read iMessages, emails or listen to phone calls. It cannot access device photos or videos, and will not report browsing or app usage habits. If the MDM solution didn't install the data, it also cannot remove it.

USER-INITIATED SAFETY

Encourage the right behavior by inviting employees to enforce workplace safety. This will help build habits in employees to actively keep themselves safe. Use Jamf Setup and Jamf Reset to manage the configuration of the device so the right app is in the right place at the right time.

Jamf Setup

Use Jamf Setup to give a user-driven experience while keeping workers safe when on the job site, in the warehouse or on the road. With just a tap, the device is configured with the exact resources the user needs, when they need it — no IT required.

Get a customized experience for any industry. Here are just a couple of possible use cases:

- Electronic flight bag
- On shift/off shift
- On the road/off road
- Electronic logging device (ELD)

Need to know who is in which state and when? Jamf integrates with business intelligence (BI) tools to provide the reporting you need in the context you need it. Get a detailed glance at any given moment to know which devices are in which state and which are not.
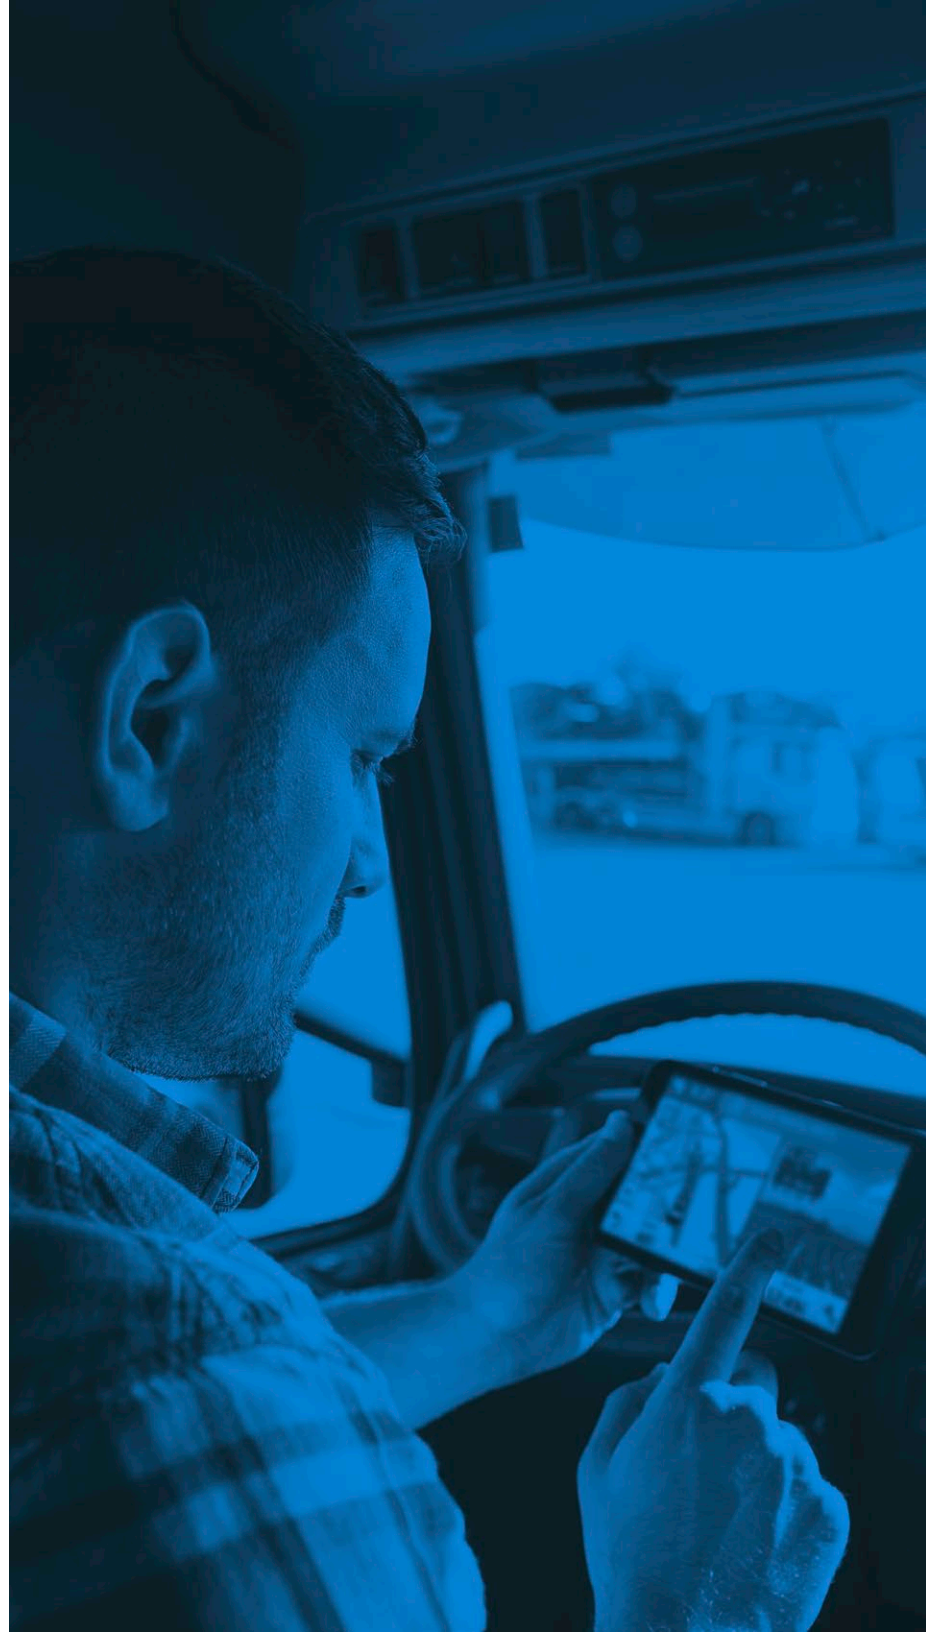

Jamf Reset

For shared-device experiences, Jamf Reset provides a simple two-step process to securely wipe a device and prepare it for the next user.

With a button to perform a device wipe right on the Home Screen, the process can become much easier than navigating the Settings menu. This can leave users feeling more comfortable as they see their private information disappear from a public or shared device.

Organization-specific messaging and branding also can be applied to inform users of next steps that might take place outside the device.

AUTOMATED SAFETY

Worker Safety powered by Jamf makes the automation of worker safety workflows easier through partnership with leading worker safety solutions, including TRUCE Software. Jamf's MDM and ecosystem management capabilities partnerered with industry-specific solutions work together to equip you with the best automations and workflows to keep your organization and employees safe.

TRUCE Software

Jamf Worker Safety, powered by TRUCE Software, provides the automated safety layer to MDM by dynamically enforcing mobile use policy based on hyper-local context to eliminate device distraction. It enables customers to protect their employees when behind the wheel and in heavy equipment or on-premises work environments. With context-based dynamic enforcement of your policies, you can keep your employees safe across the workplace while protecting your organization from liability risks. Learn more about TRUCE Software **in the Marketplace.**

TRUCE

DYNAMIC INTELLIGENCE: Adjust user profiles and enforcement as the needs of the worker change based on movement, proximity and other context of the individual user.

FULLY INTEGRATED: Integrated permissions that can scale out to the entire workforce while still being hyper-local to each worker.

Steeped in deep iOS heritage, Jamf Worker Safety, powered by TRUCE, preserves the Apple experience while empowering productive use of mobility, protecting organizations from liability and keeping workers safe.
