

CASE STUDY

Constructing a better blueprint for device management

Colasanti Construction Services, Inc.
MICHIGAN, USA

THE CHALLENGE

Colasanti is a construction company based in Michigan, providing services in 25 states across the country. Field employees are issued iOS devices that allow them to work more efficiently on the job site and stay connected with the rest of the company.

Will Kosnik is the sole IT person for the company and because time is limited, ease of use and efficiency are important when it comes to device management. Most of Colasanti's employees are in the field on a day-to-day basis, all across the country, so Kosnik needed a seamless way to make sure each device had company email, Wi-Fi, the necessary apps, etc.

“Jamf Now has been a huge help - what used to take hours on the phone or even trips on a plane, I can do in a few minutes from my Jamf Now web portal.”

-Will Kosnik

THE SOLUTION

Jamf Now provided a way for Will to get all Apple devices up and running and to keep them updated without having to physically touch each one. “Jamf Now has been a huge help since we were introduced to it a few years ago. I can now manage apps, emails and restrictions from one singular point, and even remotely erase a device if it's been stolen. It gives me complete control over the 100 devices that are located all across the country. What used to take hours on the phone or even trips on a plane, I can do in a few minutes on my web portal,” said Will.

Jamf Now was built from the ground up to do the heavy lifting of device management, so that you don't have to. Many people find themselves trying to setup, manage and protect their company's Mac, iPhone, iPad and iPod devices manually. Jamf Now is a simple, intuitive way to manage Apple devices, and help people take back their nights and weekends.
