# JAMF SOFTWARE ANNOUNCES "SECURING THE MAC OS: FULL DISK ENCRYPTION USING SOPHOS SAFEGUARD" WEBINAR

**(Minneapolis, MN) —** As Enterprise businesses increasingly adopt the Mac OS platform, security and regulatory compliance are becoming important focuses for IT Administrators. At JAMF Software, we have concentrated our efforts on combining technologies that are native to the platform (Mac OS) with a management framework (The Casper Suite) that automates many of the processes.

**Securing the Mac OS: Full Disk Encryption using Sophos SafeGuard**
Customers across the Commercial, Education and Government sectors are experiencing increased pressure to demonstrate compliance with an array of regulations which may include the U.S. Government Configuration Baseline (USGCB), Payment Card Industry Data Security Standards (PCI DSS), Secure Technical Implementation Guides (STIGs) and Sarbanes-Oxley Act (SOX).

Mac OS X is known for being extremely secure, a factor that is increasingly cited as one of the driving factors behind widespread adoption of the platform. We will explore techniques to increase the security of native technologies and further protect your enterprise using third party software. We will describe how to automate deployment of the Sophos SafeGuard product using the Casper Suite, configure disk encryption settings, report on the status of disk encryption, alert in the case of failure and remediation in either a manual or automated fashion. Please join Rachel Kjos and Chip Pearson as they explore these topics and more:

- Strategies for deployment and ongoing reporting
- Alerting on disk encryption status
- Actionable alerts

The webinar and live Question and Answer session will be held on:

> Thursday October 14th, 2010
> 2:00 pm Central Time

Please register for this free webinar in advance:

> http://www.jamfsoftware.com/solutions/full-disk-encryption

The seminar is intended for JAMF Software customers, IT administrators, partners and people interested in security on the Mac OS platform. Rachel Kjos and Chip Pearson hope you can join them for the live webinar on October 14th. However, if you are unable to attend the live event, we will be posting an archive and resources related to security on the JAMF Software website after the event.

-ends-

**About JAMF Software**
JAMF Software, founded in 2002 and headquartered in Minneapolis, MN, is the creator of the Casper Suite, the only suite of client management software developed exclusively for the Apple platform. As such, it offers a native solution that provides great breadth and depth of functionality for IT managers including inventory, package building, image management, remote imaging, remote updates, mobile device management and a powerful framework for automated support.
