v3.1	<ul style="list-style-type: none"> ▪ Added support for the JSS v9.0. ▪ Fixed an issue that prevented the Altiris plug-in from sending information for computers in the JSS that do not have a UDID. ▪ Fixed an issue that prevented the Altiris plug-in from being installed on Windows. ▪ Fixed an issue that prevented the Altiris plug-in from being installed on a server multiple instances of the JSS web application. ▪ Fixed an issue that prevented the Altiris plug-in from sending information for computers when the collection of UNIX executables is enabled in the JSS v8.7 or earlier. ▪ Fixed an issue that caused the Altiris plug-in to create a duplicate computer record in Altiris when inventory is updated for the computer in the JSS.
v3.0	Re-implemented the plug-in to interact with the JSS Events API, allowing inventory information from the JSS to be updated in Altiris in real time.
v2.0	<ul style="list-style-type: none"> ▪ Added support for mobile devices. ▪ Added Debug mode. ▪ Added support for international characters.

Known Issues

The following are known issues in the Altiris plug-in v3.2:

- When you upgrade the JSS, you need to re-install the Altiris plug-in.
- If your JSS is hosted on a Windows server, some international characters may not be exported properly.
