4 Requirements

4 Upgrading Composer

Composer Versioning

Composer may have non-consecutive version numbers. The version number always corresponds with a version of the Casper Suite, but Composer is not necessarily released every time the Casper Suite is released.

Note: The Casper Suite is a complete OS X and iOS management solution available from JAMF Software.

Bug Fixes and Enhancements

Fixed in v9.31:

- [D-006262] Fixed an issue that sometimes prevented Composer from building DMG packages using a snapshot.
- [D-006698] Fixed an issue that caused Composer to display an incorrect package size when building a package source by dragging an OS package to Composer.

Fixed in v9.32

- [D-006344] Fixed an issue that sometimes caused Composer to fail to create a package source from a QuickAdd package.

Installation

Requirements

Composer v9.32 can run on the following operating systems:

- OS X v10.5.x
- OS X v10.6.x
- OS X v10.7.x
- OS X v10.8.x
- OS X v10.9.x

Upgrading Composer

To upgrade Composer, simply replace it with the most current version.

It is also recommended that you open Composer's Preference window and verify the new Exclusion List.
