Organizations know that today's workers want technology that helps them be at their best. As more users choose Apple and are able to work from anywhere, they also know they must provide a better user experience and a more secure workplace.

When users are allowed to be productive and creative, and organizations are confident that devices are safe and protected, their technology is doing what it's intended to do — simplifying work.

Managing and securing Apple at work

Jamf bridges the gap between what Apple provides and what enterprises require, providing complete management and security solutions for an Apple-first environment that is enterprise secure and consumer simple while protecting personal privacy.

With Jamf, you can:

- Automate every aspect of Apple device and application management, enabling organizations to scale their Apple fleet while empowering users to be efficient and productive
- Empower users to work from anywhere, safely, with powerful security capabilities that protect organizations and users without impacting productivity.
- Extend and integrate Jamf with a comprehensive API and robust network of marketplace partners to ensure that Jamf integrates with your overall technology and security investments.

Tap into a better solution

Simply purchasing Apple isn't what makes this possible, it's what organizations do with their devices that makes the difference. which is why Jamf's management and security solutions scale with any type of organization.

Jamf Solutions

Zero-touch Deployment

Deploy personalized devices to users anywhere without touching the device

Mobile Device Management

Automate and scale ongoing device management and security tasks

Inventory Management

Collect user, hardware, software and device security data to understand the health of your entire environment

App Management

Increase end user productivity with automated workflows to update and deploy apps

Self Service

A curated, on-demand user catalog of approved apps, settings, and resources

Identity & Access Management

Provide users with a seamless log-in experience from onboarding to access with one set of cloud identity credentials

Endpoint Protection

Purpose-built for Apple, protect devices from threats to keep organization and personal data safe

Threat Prevention & Remediation

Prevent cyber threats such as phishing attacks that can put organizational or personal data at risk

Content Filtering

Privacy-focused content filtering gives organizations powerful tools to control what kind of content is accessed on work devices while ensuring a user's personal data is not inspected

Zero Trust Network Access

Secure access to business resources and applications

Security Visibility & Compliance

Validate that devices meet specific compliance requirements and react immediately if anything deviates from baseline
