

A photograph of a person wearing a blue baby carrier, holding a baby. The person is looking down at a tablet computer they are holding with both hands. The background is a blurred indoor setting.

Bridge the gap between hospital and home

Extend the impact of care with Locus and Jamf Pro

Patient expectations and care extend past discharge and into the home.

Now more than ever, hospitals must find new ways to engage patients across the care continuum. With the **Locus Platform** and Apple iPad, care teams can provide real-time communication from hospital to home, increase adherence to discharge instructions and improve clinical outcomes – all while driving a better patient experience.

Deliver a best-in-class secure healthcare experience on iOS with the **Locus Platform** powered by **Jamf Pro**.

“It’s amazing to see the reassurance that comes when we can send families home with a solution that allows them to stay engaged with us from day one.”

Dr. Jeff Vergales, Pediatric Cardiologist,
University of Virginia

Enabling communication and remote monitoring for patients who are now home from the hospital with a fully managed solution.

Especially useful for complex healthcare populations like pediatrics, transplant, cardiology, neonatology, hematology and oncology; the **Locus Platform** is a fully managed iOS solution that drives transparency and care where it's needed most.

Benefits for patients and families:

With **Locus for the Patient**, patients and their families stay connected with healthcare providers and systems while at home. View and monitor healthcare reports securely and receive education from providers.

- ✓ Contact your personal care team
- ✓ Submit necessary data points in real time
- ✓ Seamlessly share to an array of providers, enabling a network of cohesive care
- ✓ See a customized interface with only the tools you need
- ✓ Easily view and upload photos and videos, vital signs and more
- ✓ Securely share data through an easy-to-use iOS interface

Benefits for clinicians:

With **Locus for the Clinician**, clinicians can receive data entered by patients and their families and use that information to inform care, allowing for greater efficiency by providers and health systems.

- ✓ Gain a holistic view of a patient from any location
- ✓ Monitor a patient's status at home
- ✓ Answer questions remotely, eliminating unnecessary visits
- ✓ Make in-home care tips and recommendations
- ✓ Configure settings by patient or population-level
- ✓ Securely and remotely manage iOS devices; and easily troubleshoot
- ✓ Dial patients directly from the clinician app

Ready to extend next-level patient care?

Make it possible for those in your care and their families to feel supported and informed — even from afar. Harness the power of Apple for your patients and care teams with the **Locus Platform** and **Jamf Pro**.
