

## Apple Management for Schools

### INVENTORY, DEPLOY AND SECURE APPLE DEVICES WITH EASE

Ready-made mobile device management (MDM) solution for any school, any size, anywhere in the world.

Jamf School is a purpose-built MDM solution for education. With its intuitive web-based interface — deploying, conducting inventory and securing Mac, iPad, iPhone and Apple TV has never been simpler. It gives you the ability to manage Apple devices — the best learning technology — with ease, so you can focus on students.

**Jamf School is a powerful and affordable MDM for the modern, digital classroom.**

Whether you've been using Apple for years and have thousands of devices in your schools, or are just beginning to integrate Apple devices into your learning curriculum, Jamf helps schools of all sizes engage with students in new ways and deliver an active learning environment with Apple devices.

# Why use Jamf School?

**No platform offers better security or delivers a better learning experience than Apple. And no tool manages Apple education technology better than Jamf School.**

## Teacher, parent and student apps

Jamf School apps make it possible to quickly and easily control and manage Apple devices. Students set up their own device and stay focused with Jamf Student, instructors prepare lesson profiles and communicate with students with Jamf Teacher, and parents help keep homework sessions focused and without distraction with Jamf Parent.

## Dashboard for insights

Keep track of managed devices, users and apps. See the status of devices quickly and easily, and identify issues for remediation.

## Classroom management

Classes can be easily managed by dragging and dropping the required apps and content and creating restrictions. Teachers can request apps from Jamf School, which are then shared with IT admins.

## Incident System

Use the Incident System to keep track of whether and when devices have been damaged or other possible problems have been detected.

## Locations

Tackle multiple locations or schools easily. With location support, manage each location and its devices, users and groups separately, pushing down profiles, apps, etc. from a single location.

**Purpose-built software for education is just the beginning of what you get. Educational institutions in almost 60 countries rely on Jamf School.**
