

## Why Jamf for iOS device management

As iPad and iPhone device numbers continue to rise in organizations and schools around the globe, the need for a reliable iOS management solution has never been greater. Jamf Pro — the gold standard for Apple device management — provides an industry-leading mobility solution that delivers the best and most secure end user experience possible with iPad and iPhone.

### Storied history with Apple

Jamf has been 100 percent focused on Apple management for 16 years, leveraging native Apple technology to preserve the iOS experience end users know and love. Our exclusive Apple focus keeps us in lockstep with Apple releases to deliver same-day operating system compatibility (otherwise known as day-zero support) so you and the users you support can take immediate advantage of the new productivity and management features Apple releases.

## With Jamf for iOS management, you can:

### **AUTOMATE HARDWARE DEPLOYMENT**

Through a streamlined integration with Apple Business Manager and Apple School Manager, you can deliver Apple hardware directly to users. Once they power on, Jamf Pro ensures all appropriate configurations and settings are automatically installed. With the Jamf Setup app, allow users to select their own device configurations based on role or need.

### **DISTRIBUTE APPS AND BOOKS**

Purchase apps and books in bulk from Apple and distribute them to individuals via Apple ID or directly to devices without an Apple ID. When needs change, easily revoke and reassign applications, saving you time and repurchasing costs.

### **STREAMLINE INVENTORY DATA**

Automatically collect inventory data to ensure you always have current and accurate device information. Collect user, hardware, app and security device information at various intervals.

### **TAILOR DEVICE FUNCTIONALITY**

Configure individual or groups of devices based on the unique needs of users. Create configuration profiles to define settings and distribute over the air. Based on inventory data, build device groups to trigger management tasks automatically.

### **PROTECT DEVICES AND PRIVACY**

Update new (and inherently safer) apps and software on devices, and turn on Lost Mode to lock, locate and recover lost or stolen devices. The Jamf Reset app empowers users to digitally sanitize devices directly from the Home screen.

### **EMPOWER USERS LIKE NEVER BEFORE**

Create a custom app catalog to distribute IT-approved apps, resources and configurations. Users get what they need, when they need it — all without submitting a help ticket.

### **LEVERAGE BEST-IN-CLASS SUPPORT**

Jamf provides a hands-on implementation service to get you started and offers additional service days to help you customize Jamf Pro to your specific needs. When questions or issues arise, our dedicated support staff is standing by to help — resulting in a 96 percent customer retention rate.

### **DEVICE SHARING FOR ANY USE CASE**

Jamf Setup enables shared iPad or iPhone usage for any workflow in any environment. IT supplies a list of role-based profiles (like manager, cashier or guest) and users select the appropriate configuration for their role. No IT interaction or login required. Once selected, appropriate settings, apps and resources are automatically displayed.

### **ONE-CLICK DEVICE RE-PROVISIONING**

Jamf Reset offers a streamlined workflow for re-setting devices. Users can quickly initiate a device reset from the Home screen — no IT interaction required. Once the device is reset, it is ready to be redeployed to a new user.

## **Unrivaled iOS device management**

iOS device management has never been more comprehensive than it is today with Jamf Pro. No other mobility management solution has the Apple experience, best practice knowledge, and means to help you get the most out of your iOS devices. Request a free trial or contact your preferred reseller of Apple devices to take Jamf Pro for a test drive.
