

Device Setup and Configuration

What is it?

Device Setup and Configuration Services is an engagement where certified Jamf engineers work with your team to deploy devices to end users at a fixed, per-device cost.

Who is this intended for?

Jamf customers doing large initial rollouts, refresh projects, migrations from other platforms and device integrations with Jamf products.

What's included

- DEP-based mass enrollment
- Device imaging (where needed)
- All iOS and macOS updates
- Additional account creation
- Deployment and testing of restriction and management profiles
- Project management
- Guidance on security, content distribution and managed app configurations
- MDM enrollment and/or Jamf QuickAdd Package deployment

Potential Add-ons

- Asset tagging
- Laser engraving
- Cart setup
