# Introduction

## What's in This Guide

This guide provides step-by-step instructions for deploying and reporting on Code42 CrashPlan with the Casper Suite.

## **Important Concepts**

Administrators using this guide should be familiar with the following concepts related to the Casper Suite:

- Package management
- Policies and scope
- Advanced computer searches
- Managing directory bindings

## **Additional Resources**

For more information on applications, concepts, and processes related to the Casper Suite, see the *Casper Suite Administrator's Guide*, available at: <u>http://www.jamfsoftware.com/resources/product-documentation/administrator-guides/</u>

For more information on deploying, configuring, and managing Code42 CrashPlan, view documentation articles, available at: <u>https://support.code42.com</u>

## Requirements

To administer Code42 CrashPlan using the instructions in this guide, you need:

- The Casper Suite v9.0 or later
  - The JAMF Software Server (JSS)
  - Casper Admin
  - Composer
- Code42 CrashPlan 5.0 or later
   Code42 CrashPlan Master Server
   The Code42 CrashPlan Master Server integrates with a directory service and managed computers
   bound to the same service. For detailed information on how to integrate the Code42 CrashPlan
   Master Server with a directory service, see the LDAP Reference Code42 support article.
- Managed computers with:
  - OS X v10.9 or later
  - Bound to directory service

For instructions on how to bind computers to a directory service using the Casper Suite, see "Managing Directory Bindings" and "Binding to Directory Services" in the *Casper Suite Administrator's Guide*.

# Deploying the Code42 CrashPlan App

Deploying the Code42 CrashPlan app involves the following steps:

- 1. Customize the Code42 CrashPlan App Installer.
- 2. Build a package of the Code42 CrashPlan app custom installation settings.
- 3. Upload the Code42 CrashPlan App Installer and the custom settings package to the JAMF Software Server (JSS).
- 4. Deploy the Code42 CrashPlan App Installer and the custom settings package using a policy.

## **Customizing the Code42 CrashPlan App Installer**

This section explains how to customize the Code42 CrashPlan App Installer so that the installation process is completely automated and undisruptive to users. Code42 provides a script to make this customization easy.

#### Download and Modify the Code42 CrashPlan Installer

- 1. Download the Code42 CrashPlan App Installer customization resources from your Code42 CrashPlan server by navigating to: https://YourServerAddress:4285/download/Code42CrashPlan\_Custom.zip
- 2. On an administrator computer, extract the Code42CrashPlan\_Custom.zip file.
- 3. Open the userInfo.sh file in the Code42CrashPlan\_Custom directory with a text editor.
- 4. To hide the installation from users, locate the startDesktop element and modify the value so that it looks like this:

startDesktop=false

5. To pass the username to the Code42 CrashPlan server during installation, locate the user element and modify the value.

Use the following command to select the user logged in last, before the deployment:

user=`last | grep console | grep still | awk '{print \$1}' | head -1`

You can find more information on this in the userInfo.sh file or online in the <u>Preparing The</u> <u>Code42 CrashPlan App For Deployment</u> Code42 support article.

6. Save and close the userInfo.sh file.

#### Create the Code42 CrashPlan Custom Installer Package

- 1. Open Terminal.
- 2. Navigate to the directory containing custom.sh. For CrashPlan apps version 5.x and later:

cd /Users/admin/Downloads/Code42CrashPlan\_Custom

3. Make the custom.sh file executable with the following command:

chmod +x custom.sh

4. Run the following command:

./custom.sh

- 5. Review the default settings in the script. At the end, a prompt is displayed: Change settings (yes, no, or revert) [no]?
- 6. Type "yes".
- 7. When prompted for the "primary address and port to the authority that manages the accounts and issues licenses", type the URL of your master server and press the Enter key. For example: "crashplan-master.example.com:4282".
- 8. When prompted for the "secondary address and port to the authority that manages the accounts and issues licenses", type the second URL configured for your master server and press the Enter key. For example: "192.0.2.50:4282".
- 9. When asked whether to hide the address from the user, type "yes".
- 10. When asked whether to "Lock server address setting so that user cannot change server address", type "yes".
- When prompted, type your registration key.
   Use the registration key specific to the default organization for new user registration. For example: " AAAA-BBBB-CCCC-DDDD".
   For more information on Code42 organizations, see the <u>Organizations Reference</u> Code42 support article.
- 12. When prompted for the username, press the Enter key.
- 13. When prompted for the password, type "\${deferred}".
  Note: In non-LDAP environments, a password can be automatically generated by the CrashPlan app by using \${generated}. This will only work for the initial deployment, not for installation with an already known user.
- 14. When a proxy is used, type "yes". Otherwise, press the Enter key.
- 15. (Optional) When a proxy is used, type the URL of your .pac file.

- 16. To enable Single Sign-On (SSO), press the Enter key. Otherwise, type "no".
- 17. If SSO is not required, press the Enter key. Otherwise, type "yes".
- 18. Close the configuration by typing "no".
- 19. Type the URL of the Code42 CrashPlan server. For example: "https://master-server.example.com: 4285".

The installation script will download the client installer package from the Master Server and create the custom installer package.

When finished, the following file is added to the Code42CrashPlan\_Custom directory: Code42CrashPlan\_Mac.dmg

The Code42CrashPlan\_Mac.dmg file contains the Code42 CrashPlan App Installer Install Code42 CrashPlan.pkg and a hidden .Custom directory that contains the custom installation settings you just configured. These are the files you will use to deploy the Code42 CrashPlan app.

For more information on how to create a custom installer package, see the <u>Preparing The Code42</u> <u>CrashPlan App For Deployment</u> Code42 support article.

## Building a Package of the Code42 CrashPlan Custom Installation Settings

Use Composer to build a package of the Code42 CrashPlan custom installation settings so that you can deploy them using the Casper Suite.

The following steps need to be done on a system that does not have the CrashPlan app already installed.

# Build a package of the Code42 CrashPlan Custom Installation Settings:

- 1. Mount the Code42CrashPlan\_Mac.dmg file in the Code42CrashPlan\_Custom directory by double-clicking it.
- 2. Create a new CrashPlan directory inside the root-level /Library/Application Support/folder: sudo mkdir /Library/Application Support/CrashPlan
- 3. Copy the hidden .Custom directory to /Library/Application Support/CrashPlan/ by executing the following command:

```
sudo cp -r /Volumes/Code42CrashPlan/.Custom /Library/Application\
Support/CrashPlan
```

- 4. Open Composer and authenticate locally.
- 5. Locate the CrashPlan directory in /Library/Application Support/ and drag it to the sidebar in Composer. The directory will appear under the Sources heading.

•••			C	composer 9.81				
- 😂	A					C	Search	
New	Build as DMG	Build as PKG					Search	
SOURCES		Library						
🕨 😻 CrashP	lan							
PACKAGES								
							P W Y	
					Owner:	0		
					Group:	0		

- 6. Rename the CrashPlan package source to "CrashPlanCustomInstallation".
- 7. Select the CrashPlanCustomInstallation package source in the sidebar and click **Build as DMG**.
- 8. Choose a location to save the package and click Save.

## Adding the Installer and the Custom Settings Package to Casper Admin

Add the installer and the custom settings package to Casper Admin so you can deploy them using a policy.

# Upload the Code42 CrashPlan App Installer and the Custom Settings Package

- 1. Open Casper Admin and authenticate to the JSS.
- 2. Drag the installer CrashPlanPROe.pkg and the custom settings package CrashPlanCustomInstallation.dmg to the main repository in Casper Admin. The packages are displayed in blue text until you add them to a category.

0 🔴		Casp	er Admin 9.81						
New Config New Category Add	Printers Add Dock Ite	ems New Adobe	e Install Info [	Oelete		C	<b>\</b> ≁	Filter	0

10. Click **OK**.

## Deploying the Code42 CrashPlan Installer and the Custom Settings Package

Deploy the installer and the custom settings package using a policy.

#### Deploy the Code42 CrashPlan Installer and the Custom Settings Package

- 1. Log in to the JSS with a web browser.
- 2. Click **Computers** at the top of the page.
- 3. Click **Policies** On a smartphone or iPod touch, this option is in the pop-up menu.
- 4. Click **New** 🛨 .
- 5. In the General payload, enter a display name for the policy. For example, "Install Code42 CrashPlan 5.0".

- 6. Select "Login" as a trigger.
- 7. Choose "Once Per Computer" from the **Execution Frequency** pop-up menu.
- 8. Select the Packages payload, and then click Configure.
- 9. Click Add for the installer.
- 10. Choose "Install" from the **Action** pop-up menu.
- 11. Click Add 🛨 .
- 12. Click Add for the custom settings package.
- 13. Choose "Install" from the Action pop-up menu.
- 14. Click the **Scope** tab and **edit** the scope of the policy.

Limitations	Exclusions						
uters deploy the po	licy to						
puters 0							
oy the policy to s	0						
	Туре						
	outers of automatic of the policy the policy to a solution of the policy to a solution	aders 0 outers 0 oy the policy to s 0 <b>Type</b>	deploy the policy to outers ○ oy the policy to s ○ Type	deploy the policy to suters 0 by the policy to s 0 Type	deploy the policy to outers ○ oy the policy to s ○ Type	deploy the policy to puters 0 y the policy to s 0 Type	deploy the policy to outers 0 y the policy to s 0 Type

15. Specify a distribution point for computers to download the package from.

#### 16. Click Save.

Code42 CrashPlan is installed the next time the computers in scope check in with the JSS and meet all of the criteria. Once Code42 CrashPlan is installed, it automatically begins backing up users' home directories.

# **CrashPlan App Life Cycle**

## **Deployment of App Updates**

Updates and upgrades of the Code42 CrashPlan app do not need to be deployed via the Casper Suite. Instead, the updates are directly distributed from the Code42 CrashPlan Master Server. You will need to choose the organizations that should be upgraded and the Code42 CrashPlan Master Server will do the rest automatically.

For more information, see the <u>Upgrading The CrashPlan App To Version 5.x</u> Code42 support article.

### When to Update the Deployment Package

In general, CrashPlan is able to take care of client upgrades on its own. It is best practice to create a new deployment package with the next major release.

# Reporting on Code42 CrashPlan App Usage

After deploying Code42 CrashPlan, you can create and save an advanced computer search to report on computers that have Code42 CrashPlan installed.

- 1. Log in to the JSS with a web browser.
- 2. Click **Computers** at the top of the page.
- 3. Click **Search Inventory**. On a smartphone or iPod touch, this option is in the pop-up menu.
- 4. Click New 🛨 .
- 5. Select the Save this Search checkbox.

alay Name Iay name for the advanced computer search	computer search	ay Name ay name for the advanced computer search iired]	earch	Criteria	Display			
alay name for the advanced computer search	computer search	ay name for the advanced computer search uired]	Display	/ Name

juired]			[Requir	ed]				
Save this Search								
Save this Search								
Save this Search							Cance	el
Save this Search	Cancel	Cancel					ounoor	

- 6. On the Search pane, enter a display name for the search.
- 7. Click the Criteria tab.
- 8. Click Add 🛨 .
- 9. Click Choose for "All Criteria", and then click Choose for "Application Title".
- 10. Type "Code42 CrashPlan" in the Value field.

Search	Criteria	Display			
	_				
+	Add				
And/	Or	Criteria	Operator	Value	
		Application Title	has ᅌ	Code42 CrashPlan	Delete
				Cancel	Save

#### 11. Click Save.

The results of a saved search are updated each time computers check in with the JSS and meet or fail to meet the specialized search criteria. To view the search results, click **View.**
