

Jamf Security Accelerator

Develop, deploy and audit your security baseline.

Deploying a hardened baseline is the first step in securing your workforce. To do this, you need to understand your security requirements and have the necessary tools to complete the task. Our team has the knowledge and the tools to turn this from a massive undertaking into a single-day event. In addition to this, we will review your current Jamf Pro and Protect settings to ensure that you are setup for simplicity and functionality.

What's covered?

- Jamf Security Health Check and Essentials
- Server customizations
 - Custom Jamf Protect workflows for remediation
 - Creation of Jamf Protect custom analytics and log filtering
 - Configuring of additional roles and options
- Configure additional security products
 - Jamf Private Access
 - Jamf Protect's Network Threat Prevention feature
 - Microsoft Conditional Access
- Jamf products
 - Compliance Reporter
 - Private Access
 - Jamf Pro
 - Jamf Protect and its Network Threat Prevention feature

Customer benefits

- Develop, deploy, and audit your security baseline
- Ensure that your Jamf products are configured properly
