# Advanced print management for Jamf users

ezeep complements any Jamf deployment of iPhones, iPads or Macs by simplifying workflows and delivering easy printing for point of sales, logistics, healthcare, and more.

With Jamf and ezeep, employees always have secure, easy-to-manage and easy-to-use access to any printer from their iPhone, iPad or Mac. ezeep requires neither AirPrint support nor a connection with the printer's network.

The combination of Jamf management capabilities with the power and flexibility of ezeep enables a mobile workforce to switch from digital to analog much faster when paper is needed, saving time and money and improving customer service.
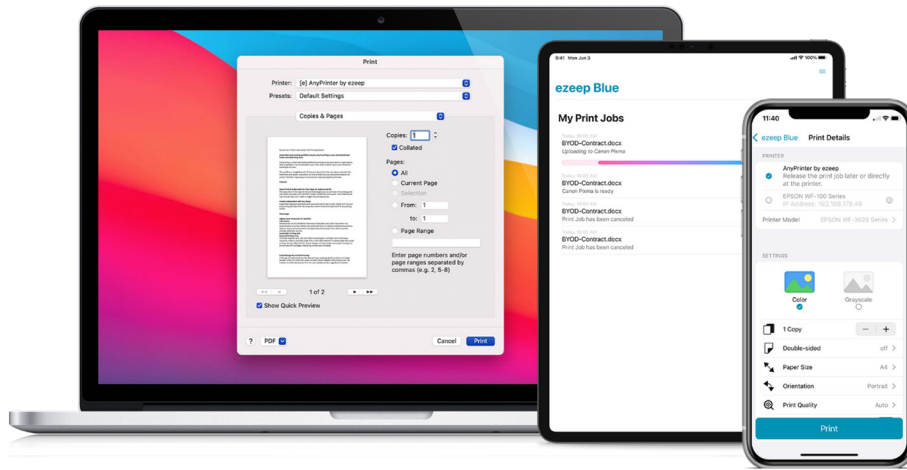

The iOS app is fully configurable in Jamf, so that Jamf admins can make granular printing configurations for users, like forcing duplex, very quickly.

Print management with Jamf

Managed configurations from Apple and ezeep allow Jamf customers to solve their print management challenges.

Not only can printers be assigned to specific users, but printer settings such as duplex, color, paper format, etc., can be instantly assigned to iPhone and iPad via Jamf policies.

ezeep

→ ezeep is a scalable cloud printing solution that connects mobile users to the enterprise printing infrastructure.

→ ezeep is simple, secure and supports all types of printers.

→ In hybrid work scenarios, employees have access to printers at the office, at home and on the go.

→ iPhones and iPads in open networks can securely access printers located in separate secured networks.

→ ezeep integrates Apple devices into enterprise print infrastructure as seamlessly as any Windows PC, all while eliminating the need for printer drivers, print servers, unsecured direct network access to printers and costly management.

Toggle advanced print settings with managed configurations

→ Custom messages when starting the ezeep printer app

→ Wi-Fi printing

→ Trigger print jobs via QR code

→ Trigger print jobs via NFC

→ Select specific paper sizes

→ Color, monochrome or duplex printing

→ Prevent users from printer selection

→ Specific printer selection

→ Hide ezeep printers in system print dialog

→ Instant deletion of print jobs

→ Prevent deleting printed jobs

→ Pull printing

→ Selection of a specific printer

→ Hide app intro and sign up screen

→ Set print quality

→ Set print orientation

→ Disable printing direct from apps

→ Define number of permitted print copies

→ Set image stabilization

How ezeep works

1 ezeep is deployed to Jamf-managed devices, taking advantage of ezeep's support for AppConfig to configure printing options

2 Jamf pushes print-specific configurations, such as restricting printing to black and white or duplex (see table on the left)

3 Users can easily print to any printer, including label printers or printers in remote locations

With Jamf and ezeep, you can empower employees to provide unparalleled customer service through modern, cost-effective devices and processes. Consult the ezeep listing in Jamf Marketplace for more information.
