

Work Anywhere.

Enable a remote workforce backed by experts in device, identity, and SaaS application management.

The ability to work anywhere is no longer optional: it is a must.

Forward-thinking IT and security teams absolutely require a long-term plan for managing and enabling remote workers around the globe. As the perimeter of the workforce expands, IT and security must find ways to manage and secure users' devices, identities and applications.

That's why Jamf, OneLogin and BetterCloud are working together to transform the way organizations deploy and manage technology across users, apps, and Apple devices. This partnership will help you to:

- Gain control of and visibility across your devices, identities, and applications
- Deliver a seamless remote onboarding experience across settings, access, and Apple devices
- Protect against insider threats with security-focused policies and workflows
- Automated offboarding that is secure and auditable

Provision, secure and protect your team anywhere with these industry leaders:

Jamf – the standard for Apple in the enterprise – helps connect, manage and protect Apple devices at any scale. Enjoy zero-touch deployment and safeguard data and users with tools purpose-built for Apple.

OneLogin – a leader in cloud Identity and Access Management – empowers organizations to secure workforce and customer connections to technology with Single Sign-On for apps and devices, next-level Multi-Factor Authentication and user provisioning.

BetterCloud – the leader in SaaSOPps - enables you to efficiently discover, manage and secure your SaaS applications. Gain centralized visibility and automate policies for user lifecycle management, file security, insider threat protection, and more.

Together, this dream team automates the onboarding and offboarding of users by relying on a source of identity truth, and automating all the tasks involved with securely managing SaaS application stacks. Enable your users to work effectively from anywhere.

Work Anywhere.

Integrate the major components of your mobility stack to deliver a seamless onboarding experience, gain visibility, and protect your organization.
