

Jamf Protect

Sub-processors

Jamf may engage vendors to provide services on our behalf. Any vendor who may process Customer Content, as defined in Jamf’s [Software License and Services Agreement \(SLASA\)](#), are considered sub-processors and are disclosed below. As set forth in Jamf’s [Data Processing Agreement \(DPA\)](#), Jamf has adequate data transfer mechanisms in place with each sub-processor.

Jamf Protect consists of MacOS endpoint security, internet content filtering and usage controls, and mobile endpoint and network. Data will be processed and stored in different locations depending on the functionality that our customers enable.

Jamf Protect MacOS Endpoint Security

Sub-processor	Location(s) of processing*	Purpose of processing
Amazon Web Services	Australia, Germany, Japan, United Kingdom, United States	Cloud Hosting
Auth0	Australia, Germany, United States	Authentication broker

* The countries listed are the sub-processor’s locations from which this Jamf product is made available. Customers may choose the specific location in which they would like the product hosted.

Jamf may use additional sub-processors for customer support – see the sub-processor listing for Jamf Support.

Changes to this sub-processor list will be communicated to all customers.

(cont. pg. 2)

Jamf Protect

Sub-processors

(cont. from pg. 1)

Jamf Protect internet content filtering and usage controls, mobile endpoint and network

Sub-processor	Location(s) of processing*	Purpose of processing
